

A Systematic Approach to Examination, Diagnosis & Manual Therapy of the SHOULDER

Diagnose Precisely. Treat Effectively.

Course Objectives

Through a combination of lecture and lab, participants will...

- Perform a systematic clinical examination to determine the most efficient course of treatment.
- Perform joint specific mobilization techniques to address capsular restrictions with limitations to 90 degrees and at end-range.
- Perform testing and treatment of limitations at the AC and SC joints.
- Understand the difference in clinical presentation between clients with external and internal impingement.
- Assess the integrity of the rotator cuff musculature, identify bursal irritation, and perform special tests related to impingement and instability.
- Develop and understanding of muscle groups to emphasize with shoulder rehabilitation using the most current research.

This course will consist of live lecture and hands-on lab demonstration modeling techniques over the course of 2 days.

There will be a maximum of 16:1 student to instructor ratio.
